

FIRELINK-400CM

Model FIRElink-400CM is designed to provide very high sensitivity smoke detection using an aspirating technique.

A unique sensing technology ensures that the detector operates at optimum sensitivity for the protected environment, without the need for complex setup.

The detector also features an integrated Command Module which provides a single location display, control and interfacing option for systems of up to 127 FIRElink detectors and allows global programming of all detector functions simultaneously.

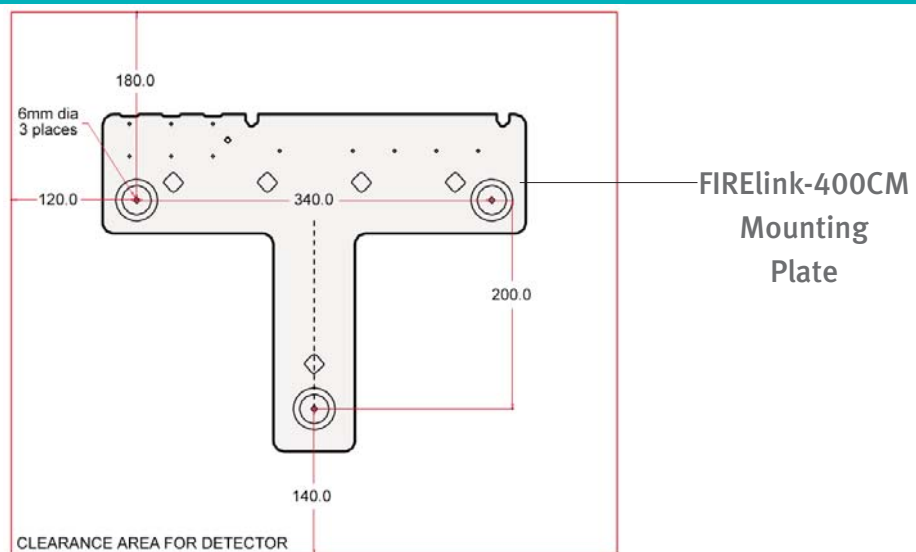

- ▶ Volt-free Fire-1 and Fault relay outputs are provided for remote monitoring by local fire detection or BMS systems.
- ▶ High sensitivity provided by laser based forward light scatter for reliable early warning
- ▶ Four sampling pipes up to 200m (aggregate) in length (still air)
- ▶ False alarms reduced by unique laser sensing technology - able to discriminate against dust
- ▶ RS485 communications built in as standard for networking and remote communications
