MODULE & CHQ-BACKBOX

DIN RAIL VERSION

All modules are fully compatible with Hochiki's ESP analogue addressable protocol and are supplied as complete enclosures, comprising of a PCB, backplate and lid. This "Smart-Fix" housing system offers the installer added flexibility.

A weatherproof box (CHQ-BACKBOX) increases the modules IP rating from IP21 to IP65. An adaptor plate (CHQ-ADAPTOR) allows the new Modules to mimic the footprint of the old-style CHQ Modules. Addressing is achieved via simple DIL switches. All modules are also available with or without an integral short-circuit isolator, and as a DIN Rail mountable version .

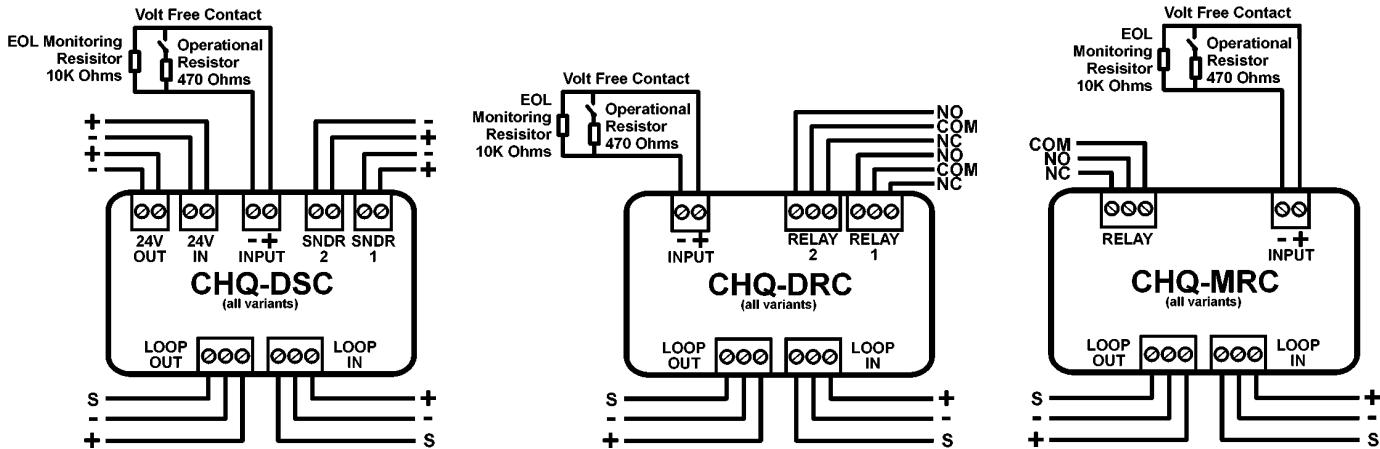

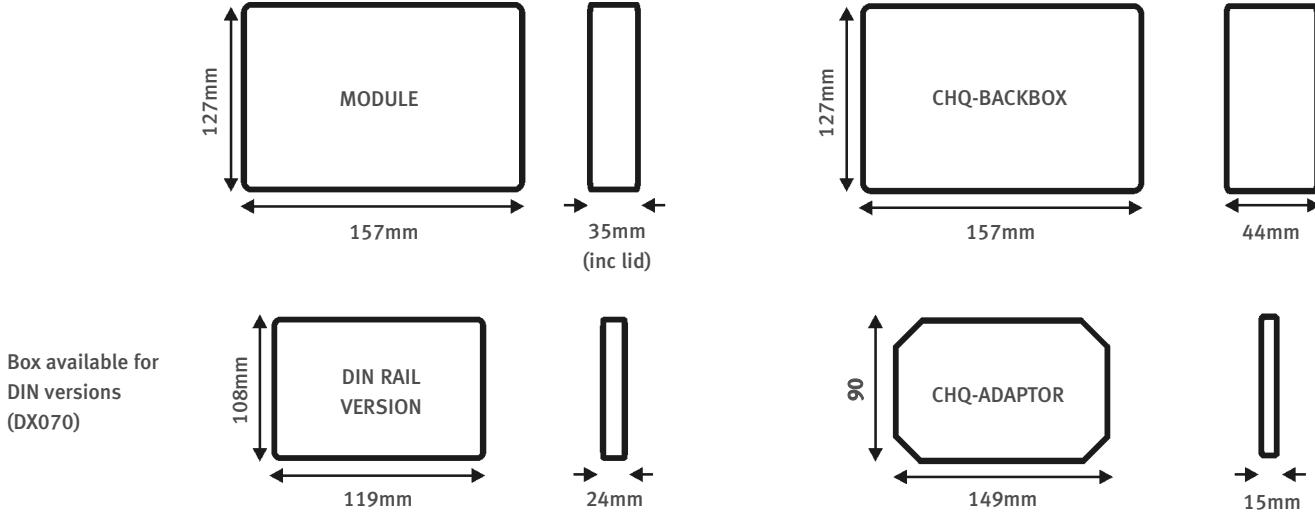

Model **CHQ-DSC** is a Dual Sounder Controller which has been designed to provide two sounder outputs (that can be driven separately) with full fault monitoring. The monitored input can be used for local power supply fault monitoring or as a general-purpose input.

Model **CHQ-DRC** is a Dual Relay Controller designed to provide two general purpose relay outputs, each output can be driven separately for control of such devices as dampers or for control of plant and equipment shutdown. The monitored input can be used for local power supply fault monitoring or as a general-purpose input.

Model **CHQ-MRC** is a Mains Relay Controller which provides a single mains rated relay output for the control of such devices as dampers, extractors or plant and equipment shutdown. The monitored input can be used for local power supply fault monitoring or as a general-purpose input.
